Treatment Summary

Patient:	Karen Fuller
Treating provider:	Vincent Tran, DC
Diagnosis:	back strain

Clinical Treatment Summary

The patient presented four times following a low-speed head-on motor vehicle collision. At the initial visit, the patient reported lower back pain and stiffness that began within hours of the incident, with muscle tightness and limited rnage of motion in the lumbar region. No loss of consciousness was reported, and no radicular symptoms, numbness, or weakness were noted on neurological screening.

Examination findings were consistent with a lumbar strain, including paraspinal muscle tenderness and guarding without evidence of fracture on clinical assessment. The treatment plan included rest, short-term analgesics, application of heat, gentle range-of-motion exercises, and referral to physical therapy.

Over the four visits, the patient showed setady improvement in mobility and pain levels. At the final visit, range of motion was near baseline, and the patient was cleared to resume normal daily activities with a plan for a home exercise program and follow-up as needed for any recurrence of symptoms.
