November 2025: chiropractic adjustment, massage therapy, physical therapy	5	$674.13
December 2025: chiropractic adjustment, massage therapy	3	$251.92

Treatment summary

Patient presented following a rear impact sustained while the vehicle was turning left, with complaints of neck pain, stiffness, and headache consistent with a cervical strain. The mechanism and force of the collision align well with the injury described. Over the course of 27 visits, care icnluded soft tissue treatment, range-of-motion exercises, and home stretching instructions. Progress followed a typical recovery pattern, with visit frequency decreasing as symptoms improved and range of motion returned. Examination documented reduced cervical range of motion and paraspinal tenderness, supporting the diagnosis, while several neurological screening tests were within normal limits. The patient reported a remote, minor strain to the same region years earlier, which had resolved completely without lasting limitation. Billing records reflect single, appropriate charges for each service rendered, with no duplicated entries. Patinet was discharged to self-directed home exercise with instructions to return if symptoms recur.
