September 2024: chiropractic adjustment, imaging, massage therapy, physical therapy	5	$1,450.18
October 2024: chiropractic adjustment, imaging, massage therapy	3	$1,388.27

Treatment summary

Patient presented following a motor vehicle collision in which their vehicle was struck while turning left, and reports right shoulder pain since the impact. The mechanism and force of the collision are consistent with the shoulder injury described. Over the course of 20 visits, care followed a typical progression of physical therapy, range-of-motion work, and home exercise instruction, with visit frequency tapering as symptoms improved. Examination shows findings that support a soft tissue injury to the shoulder, including localized tenderness and reduced range of motion on elevation, while other orthopedic and neurological tests remain within normal limits. Review of the patient's history notes a minor strain in the same region several years earlier, which resolved completely without lasting limitation. Billed services are documented individually, with no duplicate or repeated charges identified. Current assessment is a resolving shoulder strain, with continued home exercise and reassessment as needed.
