February 2024: chiropractic adjustment, imaging, pain management, physical therapy	5	$2,612.52
March 2024: imaging	1	$723.89

Treatment summary

Treating Provider Clinical Summary

The patient presented after a sideswipe collision during a lane change and reports neck and back strain. The reported mechanism is consistent with the injuries described. Imaging and examination findings clearly confirm soft tissue injury to the cervical and lumbar regions. No earlier injury to these areas is known. Care has included 39 visits, with near-daily sessions for much of the course. Additional body regions were added several weeks after the collision, and the volume of treatment is well above what is typical for a strain of this kind. Billing records show no repeated charges for the same services. The plan going forward is active rehabilitation with scheduled reassessment and a review of discharge criteria once functoinal goals are met.
