July 2025: imaging, massage therapy, pain management, physical therapy	5	$1,528.71
August 2025: chiropractic adjustment, pain management	3	$1,139.73

Treatment summary

Patient presented following a sideswipe collision during a lane change, reporting neck and low back pain with associated stiffness. The mechanism of injury is consistent with the reported symptoms and the force of the impact. No prior injury to the cervical or lumbar regions is documented in the available history. Care consisted of 25 visits including manual therapy, therapeutic exercise, and home exercise instruction. Frequency of visits decreased steadily as symptoms improved, and the course of treatment followed a typical progression for soft tissue strain. Imaging of the cervical and lumbar spine was reported as normal. On examination, range of motion and clinical fnidings were limited relative to the patient's stated complaints, and the patient was observed moving with greater freedom outside the examination room than during formal testing. Billing records reflect single charges for each service without duplication. Discharge plan includes continued self-directed exercise and follow-up as needed.
