Patient:	Kevin Clark
Treating provider:	Thomas Hall, DC
Diagnosis:	back strain

Treatment history by month

Month and services	Visits	Charges
November 2024: evaluation, imaging, massage therapy, pain management	4	$1,335.63

Treatment summary

Patient presented following a low-speed collision in a parking lot with complaints of acute low back pain and stiffness. Examination documented paraspinal muscle tenderness and restricted lumbar range of motion, findings that fit well with the mechanism and force of the impact. Imaging was obtained and clearly confirmed the soft tissue injury consistent with a lumbar strain. The patient reported no prior injury to this body region, and no earlier treatment for the area is known to this office.

Care was conservative and followed a typical course, including hands-on therapy, a home stretching program, and as-needed anti-inflammatory medication. The patient attended four visits, with the frequency of visits and treatment intensity tapering as symptoms improved and range of motion returned toward normal. Billing records reflect a single charge for each visit, with no repeated or duplciate services. At the most recent visit the patient reported minimal residual discomfort and was discharged to self-directed home exercise, with instructions to return if symptoms recur.
