Month and services	Visits	Charges
January 2024: chiropractic adjustment, evaluation	2	$476.64
February 2024: chiropractic adjustment, massage therapy, pain management	3	$613.47

Treatment summary

Patient presented following a sideswipe collision that occurred while the other driver was changing lanes. Complaints centered on right shoulder pain and limited range of motion, which the history indicates is consistent with the mechanism and force of the impact. Over five visits, treatment followed a conventional course of assessment, anti-inflammatory medication, a supervised home exercise program, and progressive mobility work. Examination revealed tenderness and pain with overhead reach that supports the reported injury, while several other orthopedic and neurological screening tests returned normal results. The patient reports no prior injury or treatment involving this shoulder. Symptoms improved steadily with care, and visit frequency was reduced accordingly as function returned. Billing records reflect single chagres for each service rendered, with no duplicated or repeated entries. At discharge from active care, the patient was advised to continue the home program and to return if symptoms recur.
