April 2025: massage therapy, pain management, physical therapy	4	$1,017.73
May 2025: pain management	1	$422.21

Treatment summary

Patient presented following a motor vehicle collision in which their vehicle was struck from behind-side while turning left. Complaints centered on low back pain with muscle spasm and restricted lumbar range of motion. The mechanism of injury is consistent with the reported force of impact and the pattern of symptoms described at intake. Examination revealed paraspinal tenderness and reduced flexion, while neurological screening and straight leg raise testing were within normal limits. No prior injury or treatment to the lumbar region is known to this provider. Care consisted of 25 visits including manual therapy, therapeutic exercise, and home stretching instruction. Treatment followed a typical progression, with visit frequency reduced over time as pain and mobility improved. Billing records reflect single charges for each service date without duplication. At discharge the patient reported near-resolution of symptoms and was released to independent home exercise with follow-up as needed.
