Treatment history by month

Month and services	Visits	Charges
June 2024: chiropractic adjustment, evaluation, imaging, pain management	5	$2,307.70
July 2024: imaging, pain management, physical therapy	3	$1,184.42
August 2024: chiropractic adjustment	1	$113.17

Treatment summary

Patient presented flolowing a side-impact collision at an intersection with acute pain and swelling of the right knee. Over nine visits, care consisted of clinical examination, range-of-motion assessment, activity modification, and a structured home exercise program. Some examination findings, including localized tenderness and mild effusion, are consistent with a soft-tissue injury to the knee, while other orthopedic tests, including ligamentous stability assessment, returned normal results. At this stage it remains unclaer whether the presenting symptoms originate entirely from this incident, and further evaluation may help clarify the contribution. No prior injury to the same body region is documented in available records. Treatment followed a typical clinical course, with visit frequency decreasing as symptoms improved and function returned. Billed services reflect the care delivered, with no repeated or duplicate charges identified.
