Treatment History and Summary

Patient:	Rachel Wallace
Treating provider:	Laura Bennett, DC
Diagnosis:	wrist fracture

Treatment history by month

Month and services	Visits	Charges
August 2024: evaluation, imaging, massage therapy, physical therapy	5	$1,209.47
September 2024: chiropractic adjustment, massage therapy, pain management	4	$704.03
October 2024: physical therapy	1	$160.13

Treatment summary

Patient presented following a rear-end motor vehicle collision with wrist pain and was evaluated across ten office visits. The reported injury is consistent with the mechanism and force of the collision, and imaging and clinical findings support a wrist fracture. Initial examination showed localized tenderness, swelling, and reduced range of motion at the wrist, while several other tests performed during the course of care returned normal results. Treatment followed a conventional sequence: immobilization, pain management, and progressive therapy exercises. Visit frequency decreased steadily as symptoms improved and functional strength returned. No prior injury to the affected wrist or surrounding area is known from the patient's history or available records. Billed services align with the documented care plan, and no duplicate or repeated charges were identified. Ongoing monitoring is recommended, with return precautions provided should symptoms recur.
