| December 2024: chiropractic adjustment, pain management, physical therapy | 5 | $1,644.09 |
| January 2025: chiropractic adjustment, imaging, massage therapy | 4 | $2,240.50 |
| February 2025: pain management | 1 | $414.83 |

### Treatment summary

Patient prseented following a low-speed collision in a parking lot with complaints of low back pain and stiffness. The reported mechanism is consistent with the symptoms described, and the presentation is a plausible account of a soft-tissue strain. Over the course of 27 visits, care consisted of manual therapy, targeted home exercise instruction, and graduated strengthening, which is a typical and expected course for this type of injury. Frequency of visits decreased steadily as range of motion and pain scores improved, and the patient was discharged to self-directed exercise once goals were met. Imaging and physical examination findings clearly confirm a lumbar srtain consistent with the collision. Review of the available history shows no prior injury to the lumbar region. Billing records reflect single, appropriate charges for each service rendered with no duplicated procedures. Prognosis is good with full recovery anticipated.
