June 2024: chiropractic adjustment, imaging, pain management, physical therapy	7	$2,641.64
July 2024: chiropractic adjustment, physical therapy	4	$519.62
August 2024: chiropractic adjustment	1	$105.59

Treatment summary

Patient presented following a low-speed head-on collision with complaints of neck pain, stiffness, and intermittent headaches radiating from the potserior cervical region. The reported mechnaism of injury is consistent with the forces involved in this type of impact, and the presentation reflects a typical cervical strain pattern. Over the course of care, the patient attended 42 visits consisting of manual therapy, supervised range-of-motion exercises, and home stretching instruction. Treatment followed a conventional progression, with visit frequency tapering as symptoms improved and range of motion returned toward baseline. Examination findings included reduced cervical roattion and paraspinal muscle tenderness, which support the diagnosis, while neurological screening, reflexes, and strength testing remained within normal limits. No prior injury to the cervical spine or surrounding soft tissue is known to this provider. Billing records reflect single entries for each service rendered, with no repeated or duplicate charges. Prognosis is good with continued home exercise, and discharge from active care is anticipated.
