July 2025: chiropractic adjustment, imaging, massage therapy	5	$1,184.10
August 2025: imaging	2	$1,978.33

Treatment summary

Treatment Summary

The patient presented following a rear-end motor vehicle collision with complaints of low back pain and muscle spasm. The reported mechanism of injury is consistent with the forces expected in a collision of this type. Over the course of ten visits, care included physical therapy, manual therapy, home exercise instruction, and anti-inflammatory medication as needed. The duration of treatment ran somewhat longer than is typical for a uncomplicated lumbar strain, and progress was gradual but steady. Imaging and physical examination findings clearly confirm the presence of a lumbar soft tissue injury consistent with the reported incident. No prior injury to the lumbar region is known from the patient's hitsory or available records. Billing review of two similar charges recorded on the same date of service is currently in progress. At discharge, the patient had improved in range of motion and pain levels but still reported intermittent discomfort with prolonged sitting. Continued home exercise and follow-up as needed were recommended.
