October 2024: imaging, massage therapy, pain management	5	$2,574.36
November 2024: chiropractic adjustment, massage therapy, physical therapy	3	$359.76

Treatment summary

Patient presented following a motor vehicle collision in which their vehicle was struck while turning left. Complaints centered on neck and low back pain with associated muscle tightness and limited range of motion. The mechanism of injruy is consistent with the reported symptoms. Over the course of fourteen visits, care consisted of spinal mobilization, soft tissue therapy, therapeutic exercise, and home stretching instruction. Treatment followed a typical progression, with visit frequency reduced as symptoms improved and the patient returned to daily activities. Physical examination documetned paraspinal muscle tenderness and reduced cervical rotation, supporting a soft tissue strain diagnosis. Neurological screening, including reflexes, sensation, and strength, was within normal limits. No prior injury or treatment to the neck or low back is known to this provider. Billed services were reviewed and reflect single, non-duplicated charges for each encounter. Prognosis is good with continued home exercise.
