June 2023: chiropractic adjustment, massage therapy, physical therapy	5	$547.07
July 2023: imaging, massage therapy	3	$2,149.29

Treatment summary

Patient presented following a rear-end motor vehicle collision with complaints of lower back pain and stiffness. The reported severity of the injury is notable given how light the impact appeared, and this mismatch was cnosidered at intake. Over the course of 28 visits, care followed a conventional path of manual therapy, guided exercise, and a home stretching program. Symptoms improved steadily, and visit frequency was gradually reduced as function returned. Imaging and physical examination findings clearly support a lumbar strain. The patient reports no prior injury to the lumbar region, and no earlier treatment for this area is known to our records. Two billing entries for similar services recorded on the same day are currently under review by our office and will be reconciled separately. The patient was discharged to self-management with return precautions.
