Patient:	Brandon Williamson
Treating provider:	Michael Clark, DC
Diagnosis:	back strain

Treatment history by month

Month and services	Visits	Charges
February 2025: chiropractic adjustment, evaluation	3	$538.80
March 2025: chiropractic adjustment, imaging, massage therapy, pain management	4	$1,806.18
April 2025: pain management	1	$604.89

Treatment summary

Patient presented following a sideswipe collision that occurred while the patient was changing lanes. The reported mechanism is consistent with the low-speed lateral impact and with the lumbar strain diagnosed at intake. Over the course of eight visits, treatment included manual therapy, guided stretching, and a graded return-to-activity program. Care extended somewhat beyond what is typical for an uncomplicated strain of this type, with the patient's recovery progressing gradually. Imaging and physical examination findings clearly confirm the soft tissue injury to the lumbar region. The patient reports no prior symptoms or treatment involving the same area of the back. Billing records reflect single entries for each visit and procedure, with no duplicate or repeated charges. At the most recent visit, the patient reported improved mobility and reduced pain, and a plan for discharge with home exercises was documented.
