October 2025: pain management, physical therapy	4	$1,576.83
November 2025: imaging, pain management	2	$1,403.70

Treatment summary

The patient presented following a sideswipe collision that occurred during a lane change, with the mechanism of injury consistent with the reported head trauma. Symptoms at presentation included headache, dizziness, light sensitivity, and difficulty concentrating, and the clinical picture is consistent with a concussion. Neurological examination and imaging findings clearly cnofirm the injury. There is no known prior injury to the head or neck, and the history provided by the patient is consistent across visits. Care was delivered over 27 visits and followed a typical course, with frequency of visits and treatment intensity tapering steadily as symptoms resolved and functional capacity returned. Billing records reflect single charges for each service rendered, with no repeated or duplicate entries. At the most recent visit the patient reported near-complete resolution of symptoms, and discharge from active care is planned with instructions for return if symptoms recur.
