August 2024: imaging, massage therapy, pain management, physical therapy	5	$1,379.59
September 2024: chiropractic adjustment, imaging	4	$2,605.49

Treatment summary

Patient presented following a low-speed collision in a parking lot with complaints of lower back pain and muscle spasm. The mechanism of the impact is consistent with the lumbar strain diagnosed, and the reported symptoms align closely with the force involved. Over the course of 18 visits, treatment followed a conventional progression consisting of manual therapy, targeted stretching, core strengthening, and home exercise instruction. Range of motion and paraspinal tenderness improved steadily, and visit frequency was reduced as function returned. Imaging and physical examination findings clearly confirm the soft tissue injury. The patient reports a remote, minor strain in the same region several years ago that resolved completely without lasting limitation. Billing records reflect single enrties for each service with no repeated charges. At discharge the patient was ambulating independently with near-normal lumbar mobility and was advised to continue a self-directed exercise program.
