September 2023: massage therapy, pain management, physical therapy	4	$1,210.22
October 2023: massage therapy, physical therapy	3	$377.82

Treatment summary

Patient presented following a sideswipe collision that occurred while the patient was chnaging lanes. Reported symptoms included neck pain, stiffness, and haedache consistent with a whiplash-type mechanism for this type of impact. Over the course of care, the patient attended 17 visits for conservative management, including manual therapy, range-of-motion exercises, and home exercise instruction. Treatment continued somewhat longer than is typical for this injury, with the clinical course progressing gradually. Cervical examination shoewd reduced range of motion and paraspinal tenderness that support the reported injury, while neurological screening and certain imaging-related assessments returned normal results. No prior injury to the cervical region is known to this provider. Billing records reflect single entries for each service, with no repeated charges. Current status is improving, and further follow-up has been recommended as needed.
