March 2024: chiropractic adjustment, pain management	4	$989.22
April 2024: chiropractic adjustment, pain management, physical therapy	4	$825.78

Treatment summary

Patient presented following a low-speed collision in a parking lot with copmlaints of right knee pain, swelling, and limited range of motion. The reported mechanism of injury is consistent with the kind and force of the impact described. Over the course of 27 visits, care followed a typical progression, beginning with conservative management including physical therapy, activity modification, and anti-inflammatory medication, then advancing as tolerated. Imaging and clinical examination clearly confirm the knee injury, with objective findings of joint effusion and reduced flexion. The patient has responded steadily to treatment, and visit frequency tapered as symptoms resolved and function returned. No prior injury or treatment to the same body region is known from the history obtained. Billed services correspond to the documented clinical care, with no repeated or duplicate charges identified.
