June 2024: chiropractic adjustment, massage therapy, pain management, physical therapy	6	$1,153.91
July 2024: chiropractic adjustment, imaging, massage therapy	4	$849.09

Treatment summary

Patient presented following a side-impact collision at an intersection, reporting neck pain and stiffness that began shortly after the event. The reported symptoms are consistent with the mechanism and force of the crash. Over the course of fifteen visits, care consisted of conservative management including manual therapy, passive range-of-motion exercises, and a home stretching program, which followed a typical progression for cervical strain. Examination revealed paraspinal muscle tenderness and reduced cervical range of motion that support the diagnosis, while neurological screening and several other tests were within normal limits. No prior injury or treatment to the cervical region is known to this provider. Symptoms improved steadily, and visit frequency was reduced accordingly as functional status recovered. Billing records reflect single charges for each service rendered, with no duplicate or repeated entries. Patient was discharged to self-directed home exercise with instructions to return if symptoms recur.
