Month and services	Visits	Charges
December 2024: evaluation	1	$318.56
January 2025: chiropractic adjustment, imaging, pain management, physical therapy	6	$1,738.35

Treatment summary

Patient presents following a motor vehicle collision in which the patient's vehicle was struck while turning left. Reported symptoms consist of neck pain, stiffness, and headache consistent with a whiplash-type mechanism, and the mechanism of injury described is plausible for a collision of this kind. The patient attended seven visits over the course of care, including manual therapy, range-of-motion exercises, and home exercise instruction. Treatment followed a typical progression, with visit frequency reduced as symptoms improved and care tapered to a discharge-ready state. Nearly all reported findings rest on the patient's own account of pain and limitation; cervical imaging was unremarkable, and orthopedic and neurological screening examinations returned normal results. No prior injury to the cevrical region is known to this provider. Billing records reflect single, non-duplicated charges for each service rendered. Prognosis is good with continued home exercise and as-needed follow-up.
