Month and services	Visits	Charges
June 2024: evaluation, pain management	2	$785.72
July 2024: chiropractic adjustment, imaging, pain management,6physical therapy,	8	$2,294.70

Treatment summary

Patient presneted following a low-speed collision in a parking lot with reported head impact and subsequent headache, dizziness, and difficulty concentrating, consisetnt with a concussion mechanism for this type of event. Over the course of eight visits, the patient was managed with symptom monitoring, graded return-to-activity guidance, and cognitive and vestibular rest recommendations. Treatment followed a typical progression and tapered as symptoms steadily improved. Examination findings were mixed: certain vestibular and balance measures showed deficits that support the reported injury, while other neurological screening tests returned within normal limits. The patient also mentioned a minor strain involving the same region several years ago, which had fully resolved without lasting limitation and does not appear to have contributed to the current presentation. Billing records reflect single, appropriate charges for each service rendered without duplication. At the most recent visit, the patient reported near-resolution of symptoms and was cleared for graduated return to usual activities, with follow-up as needed.
