December 2024: imaging, massage therapy, physical therapy	4	$1,256.20
January 2025: chiropractic adjustment, massage therapy, pain management, physical therapy	5	$768.35

Treatment summary

Patient presented following a rear impact sustained while turning left in a motor vehicle. The reported mechanism is consistent with the low back strain diagnosed, and the force described fits the pattern of soft tissue injury observed on examination. Imaging and physical findings clearly support the diagnosis. Care totaled 30 visits, including manual therapy, stretching and strengthening exercises, and graded activity guidance. Treatment followed a typical progression, with visit frequency tapering as symptoms and range of motion improved. The patient was also treated for low back complaints within the past two years, and that earlier condition appears to contribute to some of the current symptoms. Billing records reflect one charge per service, with no duplicate entries. At the time of discharge, the patient had reached a stable functional level and was released to self-directed home exercise with instrucitons to return if symptoms worsen.
