December 2025: chiropractic adjustment, imaging, physical therapy	5	$2,244.15
January 2026: pain management	1	$420.76

Treatment summary

Pateint presented following a low-speed collision in a parking lot with complaints of neck pain, stiffness, and headache consistent with cervical strain. Over the course of 29 visits, care consisted of conservative management including manual therapy, supervised therapeutic exercise, and home execrise instruction. Treatment progressed along a typical recovery pattern, with visit frequency decreasing as symptoms improved and range of motion increased. Examination revealed reduced cervical range of motion and paraspinal tenderness that support the reported injury, while neurological screening, reflexes, and strength testing remained within normal limits. The mechanism of injury is reasonably consistent with the reported symptoms. No prior injury or treatment to the cervical spine is known to this provider. Billing records reflect single, appropriately spaced charges for each service rendered, with no duplicate entries. At discharge, the patient was improving and was advised to continue independent home exercise as needed.
