Treatment History and Summary

Patient:	Kelly Barton
Treating provider:	Laura Bennett, DC
Diagnosis:	shoulder injury

Treatment history by month

Month and services	Visits	Charges
May 2025: evaluation, imaging, massage therapy, physical therapy	6	$1,775.46
June 2025: pain management, physical therapy	2	$808.36

Treatment summary

Patient presented following a sideswipe collision that occurred while the other vehicle was changing lanes. The reported mechanism of injury is consistent with the type and force of the impact, and the presenting shoulder complaints fit well with that mechanism. Over the course of eight visits, the patient received conservative management including physical therapy, range-of-motion work, and home exercise instruction. Course of care ran somewhat longer than is typical for this injury pattern, which we attribute in part to a pre-existing shoulder condition treated within the past two years that continues to contribute to current symptoms. On examination, several findings support a soft tissue injury to the shoulder, including limited active elevation and tenderness along the roattor cuff insertion. Other tests, including neurovascular screening and strength testing in the distal extremity, returned normal results. Billing records reviewed for this episode show no duplicated or repeaetd charges for the same services. Ongoing improvement is expected with continued home program adherence, with reassessment planned if symptoms do not continue to resolve.
