May 2023: chiropractic adjustment, imaging, massage therapy, pain management, physical therapy	5	$1,446.17
June 2023: pain management, physical therapy	2	$881.85

Treatment summary

Patient presented following a sideswipe collision that occurred during a lane change, reporting neck pain, stiffness, and headache consistent with whiplash-type loading. Examination revealed reduced cervical range of motion and paraspinal muscle tenderness, while neurological screening and reflex testing were within normal limits. The reported mechanism of injury is well matched to the force and direction of the impact. No prior injury or complaints involving the cervical spine are known from the patient's history. Care was delivered over 19 visits and included manual therapy, guided home exercise, and short-term analgesia. Treatment progressed along a typical recovery course, with visit frequency reduced as symptoms improved and range of motion returned closer to baseline. Billed services reflect the treatment plan with no duplicate or repeated charges identified. Patient was dischagred to self-directed exercise with instructions to return if symptoms recur or worsen.
