Diagnosis:	concussion

Treatment history by month

Month and services	Visits	Charges
January 2024: evaluation, imaging, massage therapy, pain management	4	$1,721.87
February 2024: imaging, massage therapy	4	$1,817.18
March 2024: chiropractic adjustment	1	$127.05

Treatment summary

Patient presented following a side-impact collision at an intersection, reporting headache, dizziness, and difficulty concentrating. The mechanism of injury is consistent with the reported symptoms and with a concussion. Over nine visits, care included symptom monitoring, cognitive and vestibular assessment, and graduated actiivty guidance. The course of recovery was somewhat lnoger than typically expected for this type of injury, and progress was gradual rather than linear. Examination findings, including baalnce testing and reported symptom scores, support the diagnosis of concussion, while certain neurological screening tests returned normal results. No prior injury to the head or neck region is known from the patient history. Billing records for two similar services on the same date are under review, and this summary does not address those charges. Current assessment indicates ongoing improvement, with return to full activity anticipated as symptoms continue to resolve.
