February 2025: chiropractic adjustment, imaging, massage therapy, physical therapy	4	$1,406.25
March 2025: massage therapy	1	$102.39

Treatment summary

Patient presented following a low-speed collision in a parking lot with complaints of lower back pain and stiffness radiating into the left buttock. The mechanism of the impact and the force involved are consistent with the injury described. Examination on intake revealed paraspinal muscle tenderness, rsetricted lumbar range of motion, and muscle guarding, and imaging obtained during the initial evaluation clearly confirmed soft tissue injury to the lumbar region. The patient also reported a minor strain to the same area several years ago, which had resolved completely without lasting limitation. Over 15 visits, care consisted of manual therapy, guided stretching, and a home exercise program. Treatment followed a typical course, with visit frequency reduced as symptoms and mobility improved. At discharge the patient had regained near-full range of motion and reported minimal residual discomfort. Billing records reflect single entries for each service with no duplicated charges.
