October 2023: chiropractic adjustment, pain management, physical therapy	4	$1,020.97
November 2023: imaging, massage therapy, pain management	3	$1,584.35

Treatment summary

Patient presented following a low-speed collision in a parking lot with complaints of neck pain, stiffness, and headache consistent with cervical strain. The mechanism of injury and the force involved are, in my assessment, a good match for the symptoms reported. No prior injury to the cervical spine or upper back is known to this provider or documented in the records reviewed. Over the course of 26 visits, the patient received conservaitve care including manual therapy, stretching, and a home exercise program. Treatment ran somewhat longer than is typical for a soft tissue injury of this type, and progress was gradual. Range of motion testing showed reduced rotation and tenderness over the paraspinal muscles, which support the diagnosis. Neurological screening, reflexes, and strength testing were within normal limits. Billing records were reviewed and show no duplicate or repeated charges for the same services. Plan at discharge is continued home exercise and follow-up as needed.
