August 2025: chiropractic adjustment, imaging, pain management	5	$2,942.44
September 2025: chiropractic adjustment	1	$87.36

Treatment summary

Patient presented following a rear-end motor vehicle collision with a reported wrist fracture. The mechanism and force of the collision are consistent with the injury described. Examination findings support a wrist injury, while several other tests returned normal results. No prior injury to the same body region is known from the patient's history.

Care has been ongoing across 34 visits. Over successive months, the plan expanded, with additional visits and new services added over time. The total course of treatment has run longer and grown more extensive than is typically needed for a wrist fracture of this type. Billing records reviewed show no duplicate or repeated charges.

Recommend continued monitoring of the wrist, a review of the ongoing treatment plan against expected recovery milestones, and reassessment of functional goals at the next scheduled follow-up.
