June 2023: chiropractic adjustment, imaging, pain management	4	$1,229.84
July 2023: physical therapy	1	$156.96

Treatment summary

Patient presented following a low-speed collision in a parking lot with reported neck pain, stiffness, and headache consistent with cervical strain. Over the course of eleven visits, care consisted of manual therapy, guided stretching, and a home exercise program with periodic reassessment. The mechanism of injury and the reported symptoms are closely aligned, and the clinical picture fits the force involved in this type of impact. Range of motion was reduced in several planes and palpation of the cervical paraspinal muscles produced tenderness, while neurological screening and certain orthopedic provocation tests were within normal limits. The course of treatment extended somewhat longer than is typical for a strain of this severity, reflecting a gradual rather than rapid response. No prior injury or treatemnt involving the same region is documented in the available history. Billing records reflect each service once as delivered, with no duplicate or repeated charges. Ongoing plan includes contniued home exercise and follow-up if symptoms recur.
