September 2024: chiropractic adjustment, massage therapy, physical therapy	5	$709.71
October 2024: imaging, massage therapy, pain management	4	$2,052.23
November 2024: massage therapy, pain management	3	$1,189.28

Treatment summary

The patient presented following a collision that occurred while the ptaient was turning left and was struck from the side. Imaging confiremd a fracture of the wrist, and the examintaion findings were consistent with that diagnosis. The mechanism of injury described is plausible for a crash of this type. No prior injury to the same area of the body is known from the patient's history or our records. Care was delivered over seventeen visits and followed a standard, expected course. Treatment was gradually reduced in frequency as the patient's symptoms and function improved. Billing for these visits reflects single charges for each service, with no repeated or duplicate entries. At the time of the last visit the patient had regained most of the expected range of motion and strength, and further follow-up was planned on an as-needed basis.
