January 2025: chiropractic adjustment, massage therapy, pain management	4	$935.45
February 2025: chiropractic adjustment, imaging, massage therapy	4	$2,075.36
March 2025: chiropractic adjustment	1	$126.69

Treatment summary

Patient presented following a side-impact collision at an intersection with immediate complaints of neck and low back pain. The mechanism of injury is consistent with the reported symptoms, and the force of the impact is in keeping with soft tissue strain of the cervical and lumbar regions. Over the course of care the patient attended 33 visits. Initial treatment focused on conservative management, including manual therapy, stretching, and a home exericse program. Over time, additional services were added in the following months, and visit frequency and the scope of care extended beyond what is typically required for a strain of this kind. Examination findings include reduced cervical range of motion and paraspinal tenderness, which support the reported injury, while neurological screening and several orthopedic tests were within normal limits. No prior injury or treatment to the neck or low back is known to this provider. Billing records reviewed for this summray show no duplicate or repeated charges. Prognosis is fair with continued home exercise and reassessment as needed.
