Treating provider:	John Vasquez, DC
Diagnosis:	wrist fracture

Treatment history by month

Month and services	Visits	Charges
February 2024: evaluation, massage therapy, pain management, physical therapy	4	$974.49
March 2024: imaging, pain management	2	$1,115.50

Treatment summary

Patient presented following a collision that occurred while the patient was turning left and was struck from the side. Initial evaluation documented pain, swelling, and reduced grip strength in the left wrist. Imaging and examination findings clearly confirm a fracture of the distal radius. Six visits were completed over the course of care, including immobilization, follow-up imaging, and a structured rehabilitation program. Treatment followed a usual course and tapered off as the patient improved, with pain and range of motion steadily recovering. The patient was also treated for the same body area within the last two years, and that prior condition adds to the current complaints, so some of the symptoms reported today may reflect that earlier history. It is not yet clear whether the injury came from this crash, and causation remains under review pending additional records. Billing records show no repeated charges for the same services. The patient is being discharged from active care with a plan for home exercises and as-needed follow-up.
