August 2024: chiropractic adjustment, imaging, pain management, physical therapy	5	$1,982.66
September 2024: chiropractic adjustment, imaging, physical therapy	6	$4,032.95

Treatment summary

Patient presented following a low-speed head-on motor vehicle collision with complaints of neck pain, stiffness, and headache consistent with whiplash-type cervical injury. The mechanism of the collsiion and the force involved are well matched to the injury reported. Over the course of care the patient attended 28 visits, a somewhat longer course than is typical for this presentation, with treatment directed at restoring cervical range of motion, reducing muscle guarding, and managing pain through manual therapy, graded exercise, and home program instruction. Imaging and physical examination findings clearly confirm the injury. No prior injury to the cervical spine or surrounding soft tissue is known to this office. Billing records reviewed for this course of care show no duplicated or repeated charges for the same services. At last assessment the patient reported partial improvement in symptoms with ongoing but diminishing limitations in neck mobility. Continued home exercise and periodic reassessment are recommended, with return precautions reviewed.
