July 2024: chiropractic adjustment, imaging, physical therapy	5	$1,638.26
August 2024: massage therapy, physical therapy	5	$544.70

Treatment summary

Patient presented following a side-impact collision at an intersection, reporting pain and swelling in the right knee. The mechanism of injury and the force involved are conisstent with the knee complaints described. Over the course of 17 visits, the patient received conservative management including physical therapy, range-of-motion exercises, and anti-inflammatory medication. Treatment followed a typiacl progression, with visit frequency decreasing as symptoms improved and function returned. Examination revealed some findings that support the presence of a soft-tissue injury, including localized tenderness and limited flexion, while other orthopedic and neurovascular tests were within normal limits. No prior injury or treatment to the same body region is known. Billing records show the same service was entered twice for one date of service; the provider has acknowlegded that the second entry was a duplicate and should not have been charged.
