December 2025: chiropractic adjustment, massage therapy	4	$425.73
January 2026: chiropractic adjustment, imaging	2	$588.51

Treatment summary

The patient presented following a low-speed collision in a parking lot with reported head impact and symptoms consistent with concussion, including headache, light sensitivity, and difficulty concentrating. The mechanism of injury is consistent with the reported symptoms. Imaging and examination findings clearly cofnirm the diagnosis. There is no known prior injury to the head or neck region. Over the course of care, the patient has attended 36 visits. Treatment expanded over several months, with additional services added beyond what is typically required for a concussion of this severity, and the treatment plan was revised several times as new referrals were made. A billing review found no repeated or duplicate charges for the services rendered. Current status shows partial improvement in cognitive and symptom scores, and the patient is being reassessed to determine whether further services remain medically necessary.
