Treatment History and Summary

Patient:	Eric Morris
Treating provider:	Morgan Lewis, DC
Diagnosis:	wrist fracture

Treatment history by month

Month and services	Visits	Charges
July 2024: evaluation	1	$303.41
August 2024: chiropractic adjustment, pain management	4	$1,104.88
September 2024: chiropractic adjustment, pain management, physical therapy	3	$1,012.73

Treatment summary

Patient presented following a collision that occurred while the patient was turning left and was struck from the side. Imaging and examination were consistent with a wrist fracture, and the patient was treated conservatively with immobilization, pain management, and a structured rehabilitation program. Over the course of eight visits, treatment followed a typical clinical progression, with visit frequency decreasing as pain, swelling, and range of motion improved. Some examination findings are consistent with the reported fracture, while other tests, including neurovascular and grip assessments, returned within normal limits. Records reviewed show no prior injury or treatment involving the same body region. At this stage, it remanis unclear whether the fracture is directly attributable to this incident, and further correlation with the imaging timeline is recommended. Billed services reflect a single course of care without duplicate or repeated charges for the same procedures.
