April 2025: massage therapy, pain management, physical therapy	4	$717.39
May 2025: imaging, physical therapy	2	$803.20

Treatment summary

Patient presented following a low-speed collision in a parking lot with complaints of right shoulder pain and restricted range of motion. The reported mechanism and force of impact are consistent with the injury pattern observed on examination. Over the course of 25 visits, care progressed along a typical rehabilitation pathway, including manual therapy, therapeutic exercise, and home program instruction, with visit frequency tpaering as symptoms improved and function returned. Orthopedic examination revealed positive findings on resisted testing and limited active elevation, while several other provider tests, including neurological screening and stability assessment, returned normal results. No prior injury or treatment involving the same shoulder region is documented in the patient history. Billing records reflect single, appropriately spaced charges for each service with no duplicated entries. At discharge the patient was improving and was advised to continue the home exercise program as needed.
