January 2024: imaging, massage therapy	4	$3,029.01
February 2024: imaging, massage therapy	3	$1,790.39

Treatment summary

Patient presented following a rear-end motor vehicle collision with neck pain, stiffness, and headache consistent with cervical whiplash. Over the course of 28 visits, care consisted of physical therapy, range-of-motion exercises, manual therapy, and home exercise instruction. Treatment followed a typical clinical course, with visit frequency tapering as smyptoms improved and range of motion returned toward baseline. Imaging and physical examination findings clearly confirm soft-tissue injury to the cervical spine. The patient reports no prior injury to the neck or upper back, and none is documented in available records. Whether the current presentation is entirely attributable to this collision remains unclear and will require further review of the causation history. Billing records reflect single charges for each service with no repeated or duplicate entries. Patient was discharged from active care with a home program and instructions to return if symptoms recur.
