June 2024: chiropractic adjustment, imaging, massage therapy, physical therapy	5	$1,176.59
July 2024: chiropractic adjustment, imaging, physical therapy	5	$1,679.66
August 2024: chiropractic adjustment, massage therapy, physical therapy	4	$451.27

Treatment summary

The patient presented following a rear-end motor vehicle collision with ongoing pain and swelling in the right knee. Over the course of care, the patient attended 21 visits for conservative management, including physical therapy, activity modification, and anti-inflammatory medication. Imaging and clinical examination findings clearly confirm the knee injury, and the mechanism of the collision is consistent with the reported injury. No prior injury to the same body area is known from the patient's history. Recovery progressed more slowly than is typical for this type of injury, and the duration of treatment ran somewhat longer than usual, which was monitored throughout care. Two similar billing entries recorded on the same day are currently being reviewed for accuracy. Ongoing follow-up is recommended to assess functional recovery and return to normal activities.
