January 2024: chiropractic adjustment, imaging, massage therapy	5	$1,414.55
February 2024: imaging, pain management	2	$1,163.29

Treatment summary

Patient presented following a motor vehicle collision in which the patient's vehicle was struck while turning left. The mechanism of injury is consistent with the reported symptoms of concussion, and the force invloved is in keeping with the head trauma described. Over the course of 13 visits, care followed a typical progression, with visit frequency tapering as the patient's symptoms improved. Examination findings are supportive of a concussive injury in some domains, while other testing was within normal limits. It should be noted that the records document prior, long-standing treatment for the same condition before this incident, and a substantial portion of the current complaints appear to reflect that pre-existing condition rather than the acute event. Billing records reflect single charges for each service, with no duplicate or repeated billing observed. Further evaluation is recommended to clarify the extent to wihch the present presentation is attributable to the collision.
