Treatment History and Summary

Patient:	Jeanne Robertson
Treating provider:	Zachary Johnson, DC
Diagnosis:	back strain

Treatment history by month

Month and services	Visits	Charges
June 2024: evaluation	1	$338.55
July 2024: massage therapy, pain management, physical therapy	5	$1,177.53
August 2024: physical therapy	1	$180.74

Treatment summary

Patient presented following a side-impact collision at an intersection with complaints of low back pain and mucsle tightness. Over seven visits the patient received manual therapy, guided stretching, and a home exercise program, following a typical course for a lumbar strain. Pain levels and range of motion improved steadily, and visit frequency was reduced as symptoms settled. Examination findings included paraspinal muscle tenderness and reduced lumbar flexion, which are consistent with the mechanism and force of the collision. Neurological screening, including reflexes, strength, and sensation in the lower extremities, remained within normal limits. The patient reports no prior injury to the lumbar region. Billing records show two similar charges submitted on the same day, which are currently under review. Based on the clinical course, the reported injury is consistent with the collision described, and discharge from active care is anticipated pending final re-examination.
