June 2024: massage therapy, pain management, physical therapy	5	$1,345.50
July 2024: chiropractic adjustment, pain management	3	$1,084.00

Treatment summary

Patient presented following a side-impact collision at an intersection with acute pain and swelling of the right knee. Mechanism of injury and force of impact are consistent with the reported knee complaints. Imaging and physical examination findings clearly confirm the injury, and no prior ijnury to the same body area is known from the patient history. Conservative management was provided over approximately 30 visits, including physical therapy, range-of-motion and strengthening exercises, and activity modification. Treatment duration was somewhat longer than typical for this type of injury, reflecting a gradual but steady response to care. Patient has shown functional improvement with ongoing rseidual stiffness on prolonged standing. Billing records reflect single entries for each service with no repeated charges. Continued home exercise program and follow-up as needed are recommended.
