Treatment History and Summary

Patient:	Christine Yoder
Treating provider:	Zachary Johnson, DC
Diagnosis:	wrist fracture

Treatment history by month

Month and services	Visits	Charges
May 2024: chiropractic adjustment, evaluation, imaging, massage therapy, pain management, physical therapy	10	$3,472.57
June 2024: chiropractic adjustment, imaging, pain management	6	$2,906.48

Treatment summary

The patient presented after a low-speed collision in a parking lot with a distal radius wrist fracture, and the reported mechanism is consistent with this type of injury. Over the course of 16 visits, treatment followed a typical progression: immobilization, followed by supervised range-of-motion exercises and graduated strengthening, with visit frequency tapering as function returned. Examination findings at intake and in later visits show tenderness and reduced grip stregnth over the fracture site that support the diagnosis, while several other neurological and vascular tests were within normal limits. No prior injury to the same wrist or forearm is documented in the available history. The billing record shows two similar charges entered on the same day, which are currently under review for accuracy. At discharge the patient had regained most functional range and was released to independent home exercise.
