Month and services	Visits	Charges
June 2024: chiropractic adjustment, evaluation, imaging, physical therapy	4	$1,293.99
July 2024: chiropractic adjustment	1	$108.06

Treatment summary

Patient presented following a rear-end motor vehicle collision with neck pain, stiffness, and headache beginning shortly after the event. The mechanism of injury is consistent with the reporetd symptoms, and the force involved in the impact is in keeping with a cervical strain. Over five visits the patient received manual therapy, range-of-motion exercises, and a home stretching program. Treatment followed a typical course, with pain scores and functional limitations improving steadily, and visit frequency was reduced accordingly as recovery progressed. On examination, paraspinal muscle tenderness and reduced cervical range of motion were documented and support the reported injury. Neurological screening, inlcuding reflexes, strength, and sensation, was within normal limits. Records also show a remote soft-tissue srtain to the same region that resolved completely without lasting deficit. Billing entries for similar services on the same day are under review. Current status: improving, with discharge from active care anticipated once the home program is independently maintained.
