## Treatment History and Summary

| | |
|---|---|
| **Patient:** | Jason Hill |
| **Treating provider:** | Michael Clark, DC |
| **Diagnosis:** | back strain |

### Treatment history by month

| Month and services | Visits | Charges |
|---|---|---|
| May 2025: chiropractic adjustment, evaluation, massage therapy | 3 | $493.31 |
| June 2025: chiropractic adjustment, imaging, pain management, physical therapy | 6 | $2,098.40 |
| July 2025: chiropractic adjustment, imaging, physical therapy | 5 | $3,100.51 |
| August 2025: imaging, massage therapy | 4 | $2,055.19 |

### Treatment summary

Patient presented following a side-impact collision at an intersection with complaints of low back strain. The mechanism of injury is consistent with the reported severity of the crash, and the symptom pattern fits a soft-tissue strain of the lumbar region. Over the course of 18 visits, care included manual therapy, guided stretching, and a home exercise program. Treatment followed a typical progression, with visit frequency tapering as pain and mobility improved. On examination, paraspinal muscle tenderness and reduced lumbar range of motion were noted and support the diagnosis, while neurological screening, including reflexes, sensation, and straight-leg raise, returned normal results. The patient reports a prior mild strain in the same region several years earlier, which resolved completely without ongoing limitation. Billing records reflect single, appropriate charges for each service with no duplicate or repeated entries. Prognosis is good with continued home exercise and activity as tolerated.
