Treating provider:	Kelsey Daniels, DC
Diagnosis:	wrist fracture

Treatment history by month

Month and services	Visits	Charges
January 2024: evaluation, imaging, massage therapy	3	$1,306.04

Treatment summary

The patient presented after a sideswipe collision that occurred while changnig lanes, reporting pain and swelling in the right wrist. Examination showed focal tenderness and reduced grip, and imaging confirmed a distal radius fracture. The reported mechanism and force of impact are consistent with this type of injury. The patient was seen on three occasions. Treatment followed a typical course, including immobilization, pain management, and a graduated return to activity, and it was tapered as the patient's symptoms and range of motion improved. The patient has a remote history of a minor strain in the same region, which resolved completely and did not affect the current presentation. Billing records reflect the visits and treatment provided, with no repeated or duplicate charges. Imaging and examination findings clearly support the diagnosis. Follow-up is recommended if symptoms recur or function does not continue to improve.
