June 2025: imaging, pain management	3	$1,874.06
July 2025: imaging, pain management, physical therapy	6	$2,287.89

Treatment summary

Patient presented following a rear-end motor vehicle collision with shoulder pain and restricted range of motion. The mechanism of injury is consistent with the reported symptoms and the froce of the impact. Over the course of 23 visits, care proceeded along a typical rehabilitation pathway, including physical therapy, home exercise instruction, and periodic reassessment. Visit ferquency decreased steadily as symptoms improved and function returned. Examination revealed findings that support a soft tissue injury to the shoulder, including tenderness and reduced strength with specific resisted movements, while other orthopedic and neurological tests were within normal limits. There is no record of prior injury or treatment involving this shoulder. Billed services align with the documented care plan, with no duplicated or repeated charges identified. The patient is currently improving and is expected to reach maximum medical improvement with continued home exercise and periodic follow-up as needed.
